[Flying drones and model aircraft](#) > [The Drone and Model Aircraft Code](#) > Getting what you need to fly legally

The Drone and Model Aircraft Code

For flying drones, model aeroplanes, model gliders, model helicopters, and other unmanned aircraft systems outdoors in the Open A1 and A3 categories

From: [The UK Civil Aviation Authority \(opens in a new tab\)](#)

Published: October 2019

Last updated: December 2020

Getting what you need to fly legally

How to make sure you have what you need to get started flying legally.

ID and registration requirements

There are two IDs you may need before flying drones or model aircraft outdoors in the UK:

- flyer ID, which shows you've passed the basic flying test
- operator ID, which must be labelled on your drone or model aircraft

You may need to have both.

Flyer ID

You must pass the CAA's official theory test to get a flyer ID before flying a drone or model aircraft covered by the regulations.

You're responsible for flying safely and legally whenever you fly.

Operator ID

The operator is the person responsible for managing a drone or model aircraft. This means they're responsible for things like maintaining it and making sure that anyone who flies it has a flyer ID.

You must be 18 or over to get an operator ID.

The operator is usually the person or organisation that owns the drone or model aircraft, but not always. For example, if you're younger than 18 and you own a drone or model aircraft, you must ask your parent or guardian to register for an operator ID. You'll still be able to fly as long as you have a flyer ID.

Categories of drone and model aircraft operations

The types of flying you do with your drone or model aircraft are known as operations.

There are different categories of operations. The categories affect things like where you can fly, and how close to people and crowds you can fly.

Categories of drone and model aircraft operations

Categories	Type of flying
Open A1 and A3	Basic, low-risk flying
Open A2	More risk than A1 and A3
Specific	Moderate-risk flying
Certified	High-risk, complex flying

This Code tells you everything you need to know to pass the test to get a flyer ID. This allows you to fly in the Open A1 and A3 sub-categories, which is the starting point for anyone wanting to fly a drone or model aircraft in the UK.

You'll need to go on and get further authorisation if you want to do more advanced flying, or if you want to fly a drone or model aircraft that weighs 25kg or more. For example, if you want to [fly in the open A2 sub-category, or in the Specific and Certified categories \(opens in a new tab\)](#).

Drone and model aircraft classes

Drones and model aircraft are split into five classes; from class C0 to class C4.

The classes have only recently been introduced, so your drone or model aircraft may not have been given a class when it was made. If your drone or model aircraft does not have a class mark, it is classed by its flying weight.

If you'll only use the smallest weight or class of drone or model aircraft, you may not need a flyer ID or operator ID.

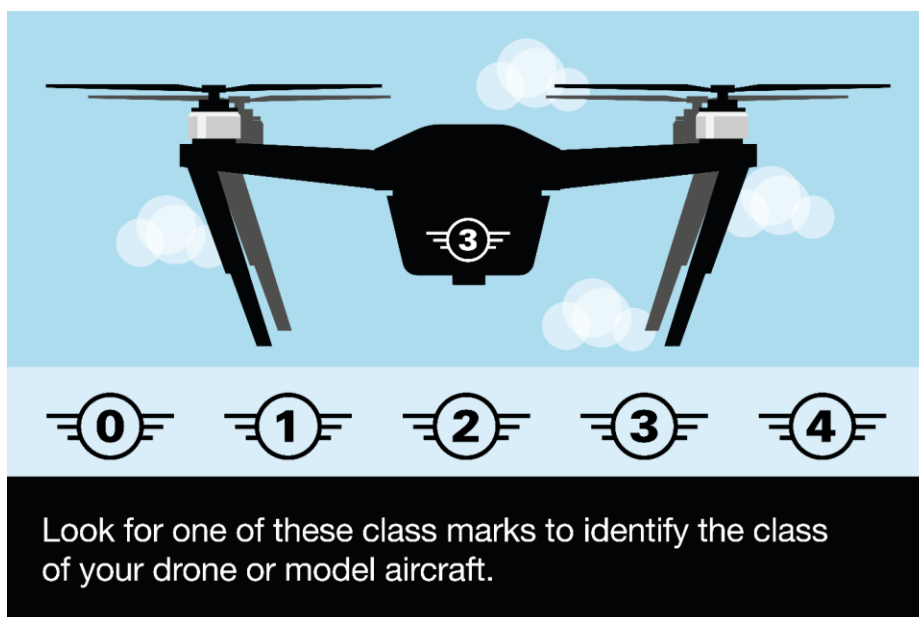

Privately built aircraft are classed by their flying weight.

Working out if you need a flyer ID, operator ID or both

Follow these steps to work out what you need to fly in the Open A1 and A3 categories of operations.

1. Check if your drone or model aircraft has a class mark.

The class mark will be marked on the drone or model aircraft and in any instructions. If not, go to step 3.

1. If it does have a class mark, follow the class requirements table to see what ID you need.

Class mark requirements

Class mark requirements table

Class	ID needed	
	Flyer ID	Operator ID
C0 - toy 	No	No
C0 - not a toy - no camera 	No	No
C0 - not a toy - with camera 	No	Yes
C1 	Yes	Yes
C2 	Yes	Yes
C3	Yes	Yes

Class mark requirements table

Class	ID needed	
	Flyer ID	Operator ID
		
C4	Yes	Yes
		

2. If it doesn't have a class mark, follow the flying weight requirements table.

Flying weight requirements

Flying weight requirements table

Flying weight	ID needed	
	Flyer ID	Operator ID
below 250g - toy	No	No
below 250g - not a toy - no camera	No	No
below 250g - not a toy - with camera	No	Yes
250g and above	Yes	Yes

toys, small drones and small model aircraft

You do not need to register if you will only fly or use the following types of drone or model aircraft:

- toys below 250g or in C0 class
- C0 class with no camera, whether it's a toy or not
- below 250g with no camera and no class mark, whether it's a toy or not

Remember, you must still follow the Drone and Model Aircraft Code when you fly.

Working out if your drone or model aircraft is a toy

There is no standard mark to show that a drone or model aircraft is a toy.

Your drone or model aircraft is likely to be a toy if:

- the manufacturer or store you bought it from describes it as a toy
- you bought it from a toy department or retailer
- it is marked as suitable for below age 14 or a younger age group
- it was advertised or packaged to attract children

Children under 12

Children under 12 must be supervised by someone aged 16 or over when flying a drone or model aircraft.

The only exceptions are when they fly either:

- a toy drone or model aircraft that is marked as C0 class
- a privately-built drone or model aircraft below 250g

If the drone or model aircraft requires a flyer ID, both the child and the person supervising them must have a flyer ID.

Flying safely and responsibly (Points 1 and 2)

General responsibilities.

1. You're responsible for flying safely whenever you fly

Follow this Code to make sure you never put people in danger.

Always be ready in case something should go wrong with your drone or model aircraft.

You could be fined for breaking the law when flying your drone or model aircraft. In the most serious cases, you could be sent to prison.

2. Always keep your drone or model aircraft in direct sight and make sure you have a full view of the surrounding airspace

You must be sure that you can spot any nearby hazards in the air or on the ground and avoid collisions.

You must be able to see your drone or model aircraft without using:

- binoculars
- a telephoto lens
- electronic viewing equipment, such as a smart phone, tablet or video goggles

Normal glasses and contact lenses are fine.

Flying with the help of an observer

You can ask someone to be your observer when you fly.

They must stand next to you and you must be able to talk to each other at all times.

One of you must be able to keep your drone or model aircraft in direct sight and have a full view of the surrounding airspace at all times.

The observer does not need to have a flyer ID, but you must tell them what to look out for. Remember, you're still responsible for keeping the flight safe.

Where you can fly (Points 3 to 9)

Legal height limits, distances from people, and areas where you must not fly.
Restrictions on flying near to airports.

3. Fly below 120m (400ft)

Flying below the legal height limit of 120m (400ft) will reduce the risk of coming across other aircraft, which normally fly higher than this.

Always look and listen out for other aircraft that may be flying below 120m (400ft), such as air ambulances and police helicopters.

Flying where there are hills, mountains or cliffs

Your drone or model aircraft must never be more than 120m (400ft) from the closest point of the earth's surface.

If you fly where the ground falls or rises, such as over hills, mountains or cliffs, you may need to adjust your flight path so that your drone or model aircraft is never more than 120m (400ft) from the closest point of the earth's surface.

4. Do not fly closer to people than 50m

This includes people in buildings and transport, including cars, lorries, trains, boats.

You must keep a minimum horizontal distance of 50m between your drone or model aircraft and people. This creates a no fly zone around people that goes all the way up to the legal height limit. It can help to think of this no fly zone as a cylinder.

You must not fly over people in this no fly zone, even if you fly higher than 50m.

People involved in what you're doing

The rule on minimum distances is different for people involved in what you're doing.

You can fly closer than 50m to people who are with you and who are involved in what you're doing, such as friends, family or colleagues out flying with you. But always remember, you must never put anyone in danger.

Small drones and model aircraft: below 250g, C0 or C1 class

The rule on minimum distances to people is different when flying small drones and model aircraft that are below 250g, or in C0 or C1 class.

If you're flying a drone or model aircraft that's lighter than 250g or is C0 class, you can fly closer to people than 50m and you can fly over them.

When you're thinking about how close you can fly, remember, you must never put people in danger. Even small drones and model aircraft could injure people if you don't fly them safely.

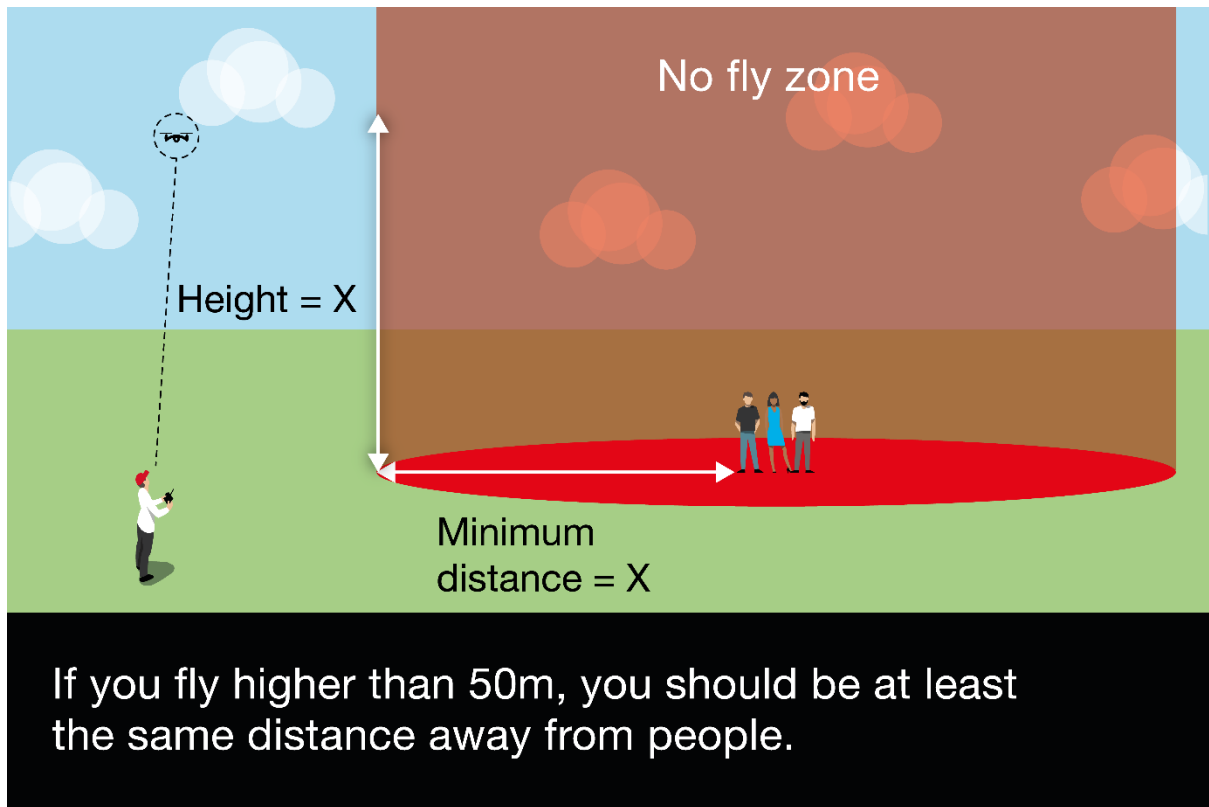

If you're flying a drone or model aircraft that's between 250g and 500g, or is C1 class, you can fly closer to people than 50m, but you must not intentionally fly over them.

Always keep a safe distance

Sometimes, you'll need to increase the 50m minimum distance from people to make sure that your flight remains safe.

Follow these general rules:

- If you fly higher than 50m, you should keep the same distance horizontally. For example, keep 80m away if you fly at a height of 80m.
- If poor weather conditions mean that there could be a greater risk to people, fly further away from them. For example if it's very windy, you should fly further away from people.
- If you fly at high speeds, fly further away to give yourself more time to react.

5. Never fly over people who are crowded together

A crowd is any group of people who cannot move away quickly because of the number of other people around them.

Never do this, no matter what size of drone or model aircraft you have.

Examples of places where people are often crowded together include:

- shopping areas
- sports events
- religious gatherings
- political gatherings
- music festivals and concerts
- marches and rallies
- at a crowded beach or park
- parties, carnivals and fêtes

6. Keep at least 150m away from residential, recreational, commercial and industrial areas

150m is the minimum distance

Be prepared to increase the distance if you need to do that to fly safely.

Small drones and model aircraft: below 250g, C0 or C1 class

You can fly small drones and model aircraft that are lighter than 250g, or C0 or C1 class, in residential, recreational, commercial and industrial areas.

Remember, you must always fly safely.

Examples of residential, recreational, commercial and industrial areas

Residential areas include:

- cities and towns
- villages
- housing estates
- schools

Recreational areas include:

- tourist attractions
- sports facilities
- beaches and parks
- theme parks

Commercial areas include:

- shopping centres
- warehouses
- business parks

Industrial areas include:

- factories
- docks
- rail and transport hubs

- **7. Stay well away from airports, airfields and aircraft**

- **⚠ Warning If you endanger the safety of an aircraft, you could go to prison for five years.**

- Most airports and airfields have a flight restriction zone (FRZ).
- Never fly in this zone unless you have permission from the airport. The zone is in place to avoid any collisions with aircraft at or near the airport.
- The [DroneSafe website \(opens in new tab\)](#) gives details of airfield restrictions and more information on getting permission.
- Some drone apps also give details of flight restriction zones.

8. Follow any flying restrictions and check for hazards

Always check for restrictions and hazards before you fly.

Examples of restrictions and hazards

Restricted airspace

Flying may be restricted around some sites, such as prisons, military ranges, royal palaces, and government buildings.

Events

Flying may be temporarily banned in specific areas during some events, such as air shows or festivals. This is to keep everyone safe.

There may also be security reasons for banning flying, such as at political conferences.

Emergency incidents

Temporary restrictions may be established at very short notice due to emergency incidents, such as road traffic accidents, fires and floods.

If you're near the scene of an accident or similar emergency, you must keep out of the way and not do anything that could hamper the emergency services.

Byelaws

Byelaws may restrict when and where you can fly from.

Look out for local signs for information and contact details where you can find out more. Byelaws are unlikely to be shown on apps or drone websites.

Tall structures

Check for any tall structures, such as cranes, masts and wires.

Do not fly if there are structures in the area that will mean it's not safe or legal.

Animals and wildlife

Do not fly where you'll disturb or endanger animals and wildlife.

Other aircraft

Always be ready to respond in the safest way possible if other aircraft appear where you're flying.

Look and listen out for unusual or specialist flying activities, such as air ambulances, police helicopters, light aircraft, military aircraft, crop spraying, and electricity pylon surveying.

Useful places to check for restrictions and hazards

Signs

Check for signs that say you cannot fly drones or model aircraft.

Some sites may have restrictions that are not listed in apps and other services.

NOTAMs (Notices to Airmen)

NOTAMs are official notices that tell people about activities that may be a hazard to flying. For example, a balloon show.

Many drone apps include details of NOTAMs. You can also find NOTAMs at the [NATS drone website \(opens in new tab\)](#)

Apps and other resources with details of restrictions

Some flying restrictions are given in the following:

- [drone apps \(opens in new tab\)](#), such as those listed on [dronesafe.uk](#)
- the [NATS drone website \(opens in new tab\)](#) (NATS is the air traffic control organisation)
- the Aeronautical Information Publication

Make sure you understand exactly what information these resources will give you.

9. Get the right authorisation before flying outside this code

This code covers flying in the Open A1 and A3 categories. If you want to fly outside the rules in this Code, you must first get the correct [authorisation \(opens in new tab\)](#).

For example, you'll need authorisation from the Civil Aviation Authority if you want to fly:

- at different heights or distances to the ones in this Code
- closer to a residential, recreational, commercial or industrial area
- over crowds or groups of people

If you want to fly at or near an airport, you need permission from the airport.

From time to time, the Civil Aviation Authority may issue [general authorisations \(opens in new tab\)](#).

Authorisation that comes with membership of a club or association

In some cases, being a member of a recognised club or association may give you additional flying authorisation. For example, you may be able to fly in an area that is normally restricted as long as you follow the conditions in the authorisation.

Check with your club or association before you fly.

Making every flight safe (Points 10 to 19)

What to do before flying, during a flight and after a flight.

10. Make sure you know what your drone or model aircraft can and cannot do

Make sure you have read any instructions before you fly.

Key points to know are:

- how far your drone or model aircraft can fly from you before it loses signal
- how long your drone or model aircraft can fly before running low on power or fuel

If your drone or model aircraft has any of the following functions, you should know how to set and update them:

- Maximum flying height.
- A lost connection or 'return-to-home' function, which means your drone or model aircraft can fly back to you if there's a problem.
- Geo-awareness software to help you avoid flying in certain restricted areas. Do not alter or disable this software if your drone or model aircraft has it.

Modifying a C class drone or model aircraft

If you modify any C class drone or model aircraft, it no longer counts as a C class drone or model aircraft. Instead, you must follow the rules for the flying weight of your drone: either lighter than 250g, or 250g and above.

It does not matter whether you've increased the weight or not.

For example, if you have a C1 drone and you change the motor to one that's not specified by the drone manufacturer, you can no longer fly your drone in recreational, residential, industrial or commercial areas.

Modifying means changing anything that affects the weight or how the drone or model aircraft flies. It does not include replacing broken or damaged parts with new ones of the same design. For example, replacing broken rotor blades with new rotor blades specified by the manufacturer.

11. Make sure your drone or model aircraft is fit to fly

Check fuel and battery levels

Take special care to check that fuel and battery levels will last through your flight. This includes any extra fuel you might need in an emergency or for flying in difficult weather, such as windy conditions.

Remember to check the battery power in the controller too.

Check any built-in software is up to date

The built-in software (called firmware) controls important navigation and flying controls. Depending on the type of drone or model aircraft you have, this could include:

- how your drone uses its power
- how your drone knows its position
- how your drone lands if there's a problem
- in some cases, the latest information on flight restriction zones and other airspace restrictions

Keeping this software up to date will also help to protect against cyber attacks.

Follow the instructions to update the built-in software (firmware). Always check that the software has updated correctly before going flying.

12. Never drop anything from your drone or model aircraft while it's flying

13. Never carry any dangerous cargo on your drone or model aircraft

You must never carry any cargo on your drone or model aircraft that could be dangerous to people, property or the environment if there was an accident.

For example, never carry:

- poisonous or corrosive cargo, such as acid or bleach
- flammable cargo, such as petrol or oil, apart from what the engine needs for that flight

14. Make sure any equipment is secure

If you plan to carry any equipment on your drone or model aircraft, you must not go over the maximum take-off mass (MTOM). This is the maximum safe weight your drone or model aircraft can take-off and fly with. It includes fuel and any items or equipment attached to it.

You can find the maximum take-off mass in your drone or model aircraft instructions.

15. Do not fly if the weather could affect your flight

Some of the things to look out for:

- strong winds could blow your drone or model aircraft off course or make it difficult to fly safely
- wind on the ground is often very different to the wind at height
- rain or other water, snow and cold weather could stop parts of your drone or model aircraft from working
- fog could mean you lose sight of your drone or model aircraft
- glare from the sun could mean you lose sight of your drone or model aircraft
- cold or wet weather could affect your ability to control your drone or model aircraft safely
- standing out in the sun could affect your ability to concentrate

Make sure your drone or model aircraft will work if the temperature is low

Follow the manufacturer's guidance on the safe temperatures to fly at.

Some types of battery do not hold their charge as long in cold weather and this may reduce the amount of time you can fly.

16. Make sure you're fit and safe to fly

Do not drink and fly

You must not fly when under the influence of alcohol. Alcohol will seriously affect your judgement and ability.

As a guide, you should apply the same limits as you would for driving a car.

Do not fly under the influence of drugs or medicine

Check with your doctor or pharmacist if you are taking medicines that may affect your ability to operate your drone or model aircraft safely. Do not fly if they advise that your ability to drive a car or operate machinery may be affected.

Do not fly if you're tired or unwell

Your judgement and ability could be affected if you are tired or unwell.

Do not fly while you could be distracted by another activity

For example:

- do not fly while driving, riding or operating a vehicle or bicycle
- do not fly while messaging or making a phone call
- do not fly more than one drone or model aircraft at a time

17. Take action quickly and safely if the situation in the air or on the ground changes

Always be ready to land your drone or model aircraft or reduce your flying height and wait until it is safe to fly again. For example, you may need to land if a group of people or animals turn up in the area where you're flying.

Low flying aircraft

Reduce your flying height or land as soon as you hear or see a low flying aircraft that may be affected by your drone or model aircraft.

Land your drone or model aircraft, or hover at a low level well out of the way, and wait until it's safe to continue with your flight. If it appears the aircraft is attempting to land, you should land your drone or model aircraft immediately.

18. Report any dangerous incidents, near misses or suspicious activity

If you're involved in a dangerous incident or near miss when you're flying your drone or model aircraft, you must [report the incident to the Civil Aviation Authority \(opens in new tab\)](#).

An incident or near miss includes anything that did or could:

- put people in danger
- cause damage to property, buildings, equipment or aircraft

The Civil Aviation Authority will use this information to monitor potential hazards and risks to help keep flying safe for everyone.

Suspicious activity and mis-use

If you see anybody using a drone or model aircraft in a suspicious or dangerous way, call your local police on 101. If it's at an airport, call airport security.

Retrieving your drone or model aircraft after a forced landing

If you make a forced landing or crash on private property, you must get the property owner's permission before retrieving your drone or model aircraft.

This is especially important at sites where security services are likely to respond if you enter without permission.

19. Make sure you have the appropriate insurance

The insurance you need depends on the size of your drone or model aircraft and what you use it for.

Insurance for drones and model aircraft below 20kg

If you fly a drone or model aircraft that weighs less than 20kg for fun, recreation, sport, or as a hobby, you can choose whether or not to have insurance.

If you fly for any other reason, you must have third party liability insurance. For example, you must have insurance if you:

- get paid to take pictures or record video or carry out surveys
- use your drone for work, such as on a farm, park or estate

Although insurance is optional if you only fly for fun, recreation, sport, or as a hobby, remember you're responsible for your actions. You could be held personally liable for any injury or damage you cause, so you may want to consider getting third party liability insurance.

Insurance for drones and model aircraft 20kg and above

If your drone or model aircraft is 20kg or more, you must always have third party insurance, no matter what you use your aircraft for.

Protecting people's privacy (Points 20 to 25)

Making sure that you don't invade anyone's privacy when you're out flying. What you can and can't do with photos and videos.

20. Respect other people and their privacy

If your drone or model aircraft is fitted with a camera or listening device, you must respect other people's privacy whenever you use them.

If you use these devices where people can expect privacy, such as inside their home or garden, you're likely to be breaking data protection laws.

It's against the law to take photographs or record video or sound for criminal or terrorist purposes.

Any photos or recordings you take may be covered by the General Data Protection Regulation (GDPR).

21. Make sure you know what your camera can do and the kind of images it can take

Knowing this will help to reduce the risk of taking photos or recording videos that invade privacy.

Make sure you know:

- what quality you can record
- how close your camera can zoom in
- if you can start and stop recording when you are flying

22. Make sure you can be clearly seen when you're out flying

This means people will know who's responsible for your drone or model aircraft.

23. Let people know before you start recording or taking pictures

In some cases, this will be easy. For example, if you're taking a photo of family and friends at a family barbeque.

In other cases, this will be less practical, so you must be careful to respect everyone's right to privacy.

Remember, you must never fly over groups, crowds, or any people who are not with you.

24. Think before sharing photos and videos

Avoid sharing anything that could be unfair or harmful to anyone.

Think carefully about who could see your photos and videos – especially before posting them on social media. Apply the same common-sense approach that you would with images or video recorded on a smartphone or digital camera.

25. Keep photos and videos secure

Store images safely. Delete anything you don't need.

If you record images for commercial use, you'll need to meet further specific requirements as a data controller.

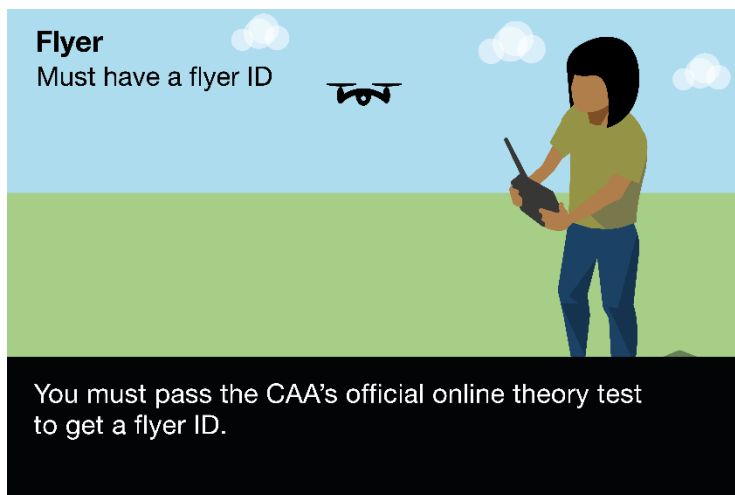

Getting a flyer ID before you fly (points 26 to 29)

What to do if you will fly a drone or model aircraft that requires you to have a flyer ID. Requirements for children under the age of 13.

26. You must pass the CAA's official online theory test to get a flyer ID

Children and adults must pass the test – there is no age limit.

For data protection reasons, children under 13 must be with a parent or guardian when they take the test and register.

27. Children under 12 must be supervised when they fly a drone or model aircraft

The person that supervises them must be aged 16 or over and have their own valid flyer ID.

Exceptions for C0 class toys and privately-built aircraft below 250g

Children under 12 do not need to be supervised when flying either:

- a toy drone or model aircraft that is marked as C0 class
- a privately-built drone or model aircraft below 250g

28. You must pass the theory test every five years

Your flyer ID will last for five years.

If you took your last test under the previous regulations, that flyer ID will last for three years. You can check when your ID expires in the My registration area.

29. Always fly safely and legally

Following the points in this Code will help you to do this.

Getting an operator ID before you fly (Points 30 to 35)

What to do if you're a drone or model aircraft operator.

30. The person or organisation that's responsible for a drone or model aircraft that requires an operator ID must register to get an operator ID

You must be over 18 to register as an operator. If you're under 18, you'll need to ask a parent or guardian to register for an operator ID.

Points 31 to 35 set out what you're responsible for if you're an operator.

Operator

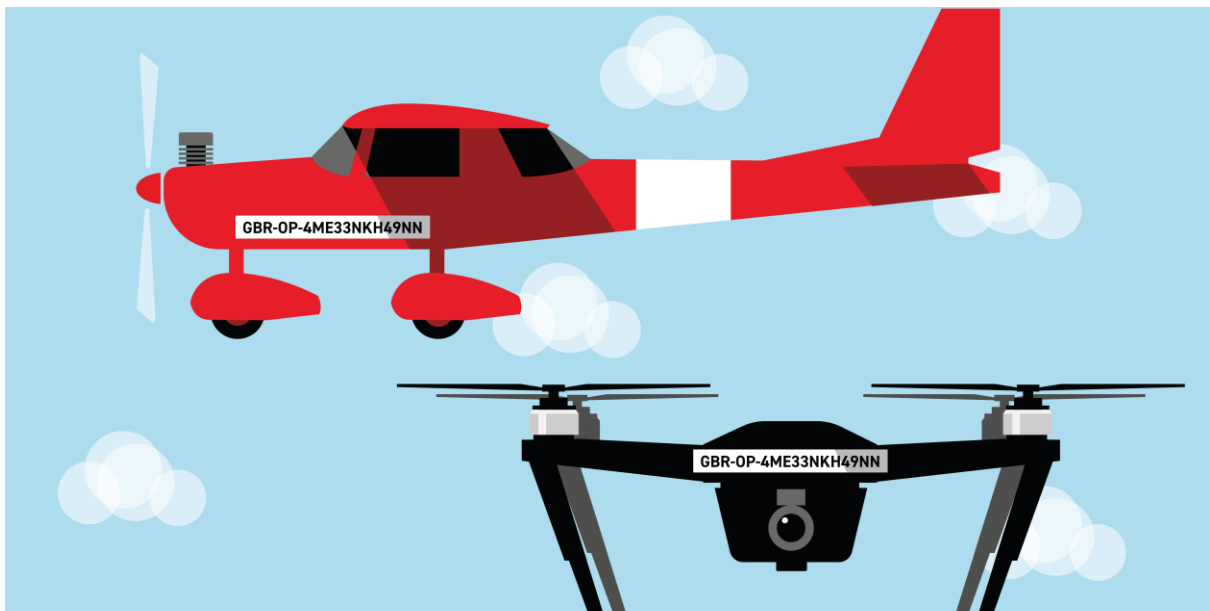

Must have an operator ID

The person or organisation responsible for a drone or model aircraft that requires an operator ID must register to get an operator ID.

31. Label all your drones or model aircraft with your operator ID

You must label every drone or model aircraft you're responsible for. You can use the same operator ID for every aircraft.

You must label your operator ID on every drone or model aircraft you're responsible for. You can use the same operator ID for every aircraft.

32. Always make sure that anyone flying your drone or model aircraft has a valid flyer ID

You can do this at the [check someone's registration status service \(opens in a new tab\)](#).

33. Set out what you expect from anyone who'll fly your drone or model aircraft and what you'll be responsible for yourself

If anyone else will fly a drone or model aircraft you're responsible for, you must tell them:

- to fly safely and follow this Code when they fly
- to follow the manufacturer's instructions for flying
- what you'll be responsible for, such as keeping any built-in software up to date
- what you expect them to do, especially to do with flying and maintaining your aircraft

If several people will fly, such as in a business, club or school, consider writing this information down so that everyone can easily access it.

34. Maintain your drone or model aircraft so that it's safe to fly

This includes following the manufacturer's instructions on maintenance and keeping any built-in software (firmware) up to date.

35. Keep your operator ID up to date

Your operator ID will last for 12 months.

Less common flying (Points 36 to 38)

Carrying out less common flying activities.

These points are not included in the theory test.

36. Flying with follow-me mode active

Some drones or model aircraft have a follow-me mode that means you can set your aircraft to follow you within a fixed distance.

You do not have to keep your drone or model aircraft in direct sight when follow-me mode is active and set to follow within 50m of you. You must still follow all of the other points.

37. Height limits for model gliders up to 10kg

The maximum height for model gliders is up to 120m (400ft) above the height you're standing at rather than above the ground level directly below it.

This is to allow for flying from hills and mountains.

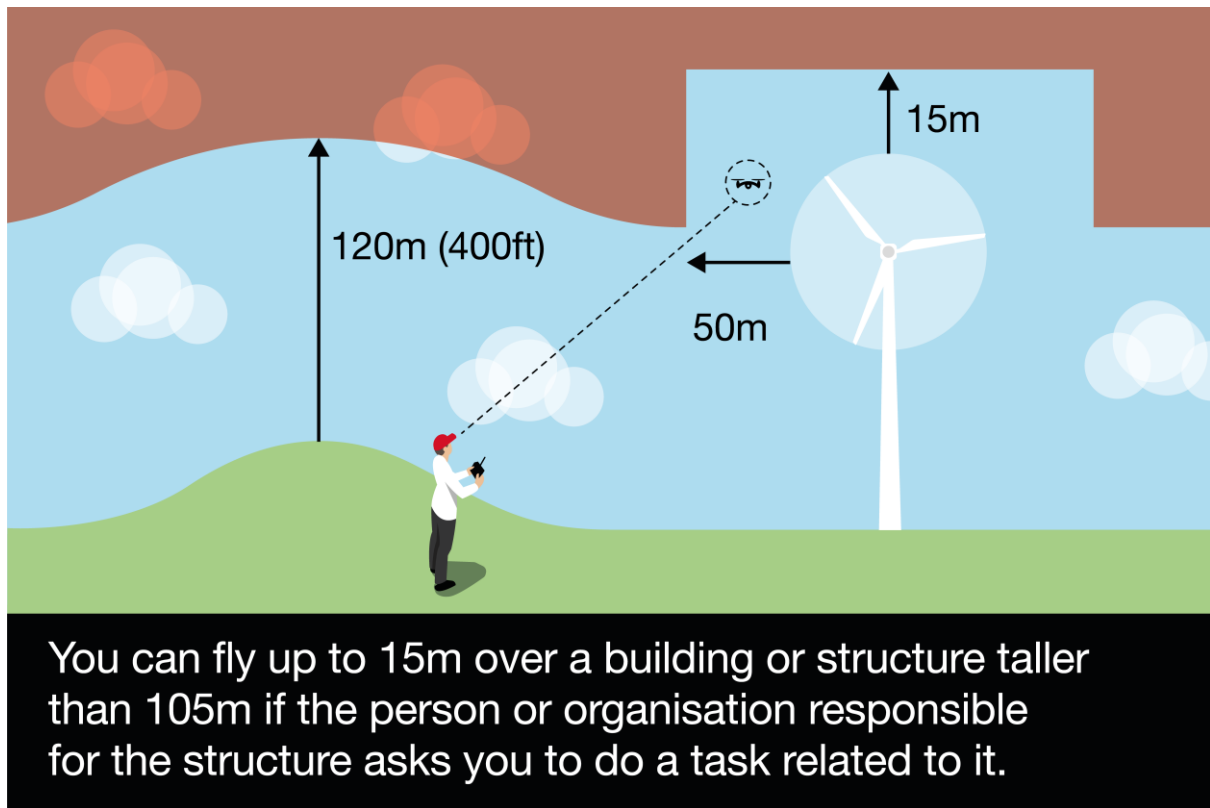

The maximum height for all other drones and model aircraft is measured from the closest point of the earth's surface to the aircraft during flight.

38. Flying over very tall structures

If the person or organisation responsible for a very tall structure over 105m asks you to carry out a task related to their structure, you're allowed to fly higher than 120m (400ft). For example, if they ask you to take pictures for a survey.

You must never fly more than 15m above the structure.

Your drone or model aircraft must be within 50m of the structure horizontally when flying over 120m (400ft).

Background: Drones and model aircraft in the law

The following acts and regulations include some of the key points of law that this Drone and Model Aircraft Code is based on. The list is not intended to be comprehensive.

For the precise wording of the law, please see the acts and regulations. These are also available in print from [The Stationery Office \(opens in new tab\)](#).

Acts and regulations

[CAP1789A: Consolidated version of the EU UAS Implementing Regulation \(opens in a new tab\)](#).

[CAP1789B: Consolidated version of the EU UAS Delegated Regulation \(opens in a new tab\)](#).

[The Air Navigation Order 2016 \(opens in new tab\)](#), including the [2018 amendment \(opens in new tab\)](#) and [2019 amendment \(opens in new tab\)](#).

[The Civil Aviation Authority has published a copy of the Air Navigation Order with amendments inserted \(opens in a new tab\).](#)

The [Data Protection Act 2018 \(opens in new tab\)](#).

Registering yourself to use a drone or model aircraft

- [Overview](#)
 - [Prepare for the theory test](#)
 - [Register and take the test to fly](#)
 - [Children and parent guidance](#)
 - [Register a child under 13 as a flyer](#)
 - [Register as an operator](#)
-

Register and take the test to fly

Use this service to:

- take the theory test to get a flyer ID
- register for an operator ID if you also own or are responsible for a drone or model aircraft

Age limits

You must be at least 18 years old to get an operator ID.

You must be at least 13 years old to get a flyer ID by yourself.

If you're younger, please ask your parent or guardian to help you and read the [children and parent guidance](#).

Before you start

You'll need:

- an email address that you can check when registering

- a debit or credit card if you're registering for an operator ID
- details of any [insurance required \(opens in a new tab\)](#)

It's a good idea to [prepare for the theory test](#).

Prices - [2021](#)

Operator and flyer registration costs and validity

Registration	Cost	Valid for
Operator ID	£9	1 year
Flyer ID	£0	5 years

If you already have an operator ID and just need a flyer ID, you'll need to add your flyer ID in the [My registration area](#).
